The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

In view of the Appeal Brief filed on June 01, 2006, PROSECUTION IS HEREBY
 REOPNED. New grounds of rejections are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if Office action is final): or,
  - (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Examiner sincerely regrets any inconvenience this may have caused the appellant.

2. It is also noted that the Appeal Brief filed on June 01, 2006 is non-compliant with the provisions of 37 CFR 41.37, since it does not contain a correct copy of the appealed claims (37 CFR 41.37 (c)(1)(viii)). The appendix is missing claims 80-83 and 88.

## Election/Restrictions

3. Claims 77, 79, 80 and 85 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, (e.g., Fig. 17), there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on April 01, 2005.

## Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3723

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 63-75, 78, 83, 84, 86 and 87 are rejected under 35 U.S.C. 103(a) as being unpatentable over Edling (4,285,253) in view of Leong (2,461,690) and/or Leong in view of Edling.

Edling meets all of the limitations of claim 63 and 83, i.e., achieving a fine smooth finish by a non-grinding means of utilizing a harden object, except for disclosing a non-motor-driven object. However, Edling discloses a superior finish by using steel, whether manual or mechanical (05:57-60) and discloses a preferred embodiment of mechanical means.

Leong teaches sharpening a knife by manual means. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the invention of Edling by using a manual means as taught by Leong, e.g., to save cost.

Regarding claims 64-75, 78, 83, 84, 86 and 87, Edling as modified by Leong meets all of the limitations, e.g., elongated flat surface (Edling, 34); stationary object (not movable); rotatable cylinder; braking mechanism (threaded connection) which is considered to meet the limitation of adjustable object (claim 70), however further modifying the invention for adjustability is well within the knowledge of one of ordinary skill in the art; grooved surface; Rockwell C-65; rods or rollers; handle; repeatedly moving the edge of the blade against the harden object meeting the limitations of "wedged" (to force into or through); and hardened object made of glass or crystal is considered to meet the limitation of claims 78 and 86, however, choosing a surface roughness of less than 10 microns would have been obvious to one having ordinary skill in the art at the time the invention was made, dependent on work-piece/operational parameters, which involves only routine skill in the art, and since it has been held that where the general conditions of a

Application/Control Number: 10/803,419

Art Unit: 3723

claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Leong discloses a sharpening apparatus and method meeting all of the limitations of claims 63 and 83, except for disclosing a harden object. Edling teaches achieving a fine smooth finish by a non-grinding means of utilizing a harden object. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the invention of Leong by using a harden object as taught by Edling, e.g., for a superior finish.

Regarding claims 64-75, 83, 84, 86 and 87, Leong as modified by Edling meets all of the limitations as noted above.

6. Claims 63-68, 70-75, 78, 83, 84, 86, and 87 are rejected under 35 U.S.C. 103(a) as being unpatentable over Friel (Des. 368,217) in view of Edling.

Friel meets all of the limitations of claim 63 and 83, i.e., knife-edge enhancing or conditioning apparatus and method having a precision angle knife guide, except for disclosing a hardened object for the sharpening tool.

Edling teaches achieving a fine smooth finish by a non-grinding means of utilizing a harden object. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the invention of Friel by substituting the sharpener with a harden object as taught by Edling to obtain a fine smooth finish.

Regarding claims 64-68, 70-75, 78, 83, 84, 86 and 87, Friel as modified by Edling meets the limitations, as noted above and in previous office actions.

7. Claim 69 is rejected under 35 U.S.C. 103(a) as being unpatentable over PA (prior art, Friel modified by Edling) as applied to claim 63 above, and further in view of Fletcher (4,450,653).

Friel modified by Edling meets all of the limitations of claim 69, i.e., except rotatable

Page 5

harden object with braking mechanism.

Fletcher teaches setting the harden object into a support by threaded means. It would

have been obvious to one of ordinary skill in the art, at the time the invention was made, to

further modify the modified invention of PA by using a threaded connection between the object

and the support as taught by Fletcher for an adjustable object.

Allowable Subject Matter

8. Claims 81 and 82 are allowed.

9. Claims 76 and 88 would be allowable if rewritten to overcome the rejection(s) under 35

U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of

the base claim and any intervening claims.

10. The following is a statement of reasons for the indication of allowable subject matter: a

restraining mechanism (O-ring 20) applying a resistive force, i.e., the object being displaceable

(as defined by Specification, not met by rotation of the object), and knife guide being pivotally

mounted in a support member with an adjusting structure (Fig. 16A) as recited in claim 50, place

these claims in condition for allowance.

Response to Arguments

11. Applicant's arguments filed 12/15/05 have been fully considered but they are not

persuasive. Applicant argues against the obviousness rejections by the Declaration filed on

12/15/05, which appears to argue against the motivation to combine and that the combined

references would not be operative. These arguments fail to provide evidence to traverse the

rejections but presents arguments by the inventor traversing the rejection by arguing that the

edge achieved by the references combined is not the same, motor driven apparatus is a

different technology than a manual one, etc., which appear to have been more appropriate

Art Unit: 3723

presented under the "Remakes" rather than under Rule 131, 132 affidavit. However the arguments fail to point out what part of claim limitations are not met by the combined references, since broadly providing manual activity to replace a mechanical or automatic means which has accomplished the same result involves only routine skill in the art, particularly in view of the teachings as noted in the office action.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, modifying an apparatus by utilizing manual means is considered obvious to one of ordinary skill in the art in order to save cost, particularly since Edling discloses a superior finish by using a steel, whether manual or mechanical (05:57-60) and discloses a preferred embodiment of mechanical means.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hadi Shakeri whose telephone number is 571-272-4495. The examiner can normally be reached on Monday-Friday.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
